

Use the browser for quick drafting. Use the desktop app when local files and history matter.

Markdown in VeloWrite

Use this guide as a quick visual reference. Each section shows what you type on the Markdown side and what VeloWrite turns it into in the preview.

Beginner

1. Headings Create Structure

Headings make long documents easy to scan. VeloWrite also uses them to build the outline in the left sidebar.

TYPE THIS

```
# Product Notes
## Goals
### This Week
```

VELOWRITE PREVIEW

Product Notes

Goals

This Week

2. Paragraphs, Bold, Italic, And Inline Code

Plain text stays readable. Add emphasis only when it helps the reader.

TYPE THIS

```
This is a normal paragraph.

This is important.
This is subtle emphasis.
Use inline code for commands or values.
```

VELOWRITE PREVIEW

This is a normal paragraph.

This is **important**.

This is *subtle emphasis*.

Use `inline code` for commands or values.

3. Lists And Checklists

Lists are ideal for notes, todos, meeting summaries, and release checklists.

TYPE THIS

- Draft the outline
- Review the examples
- Export the final document

1. Open VeloWrite
2. Write in split mode
3. Save or export

- ☒ First draft
- ☐ Final review

VELOWRITE PREVIEW

- Draft the outline
- Review the examples
- Export the final document

1. Open VeloWrite
2. Write in split mode
3. Save or export

☒ First draft

☐ Final review

4. Links And Images

Links are rendered as clickable text. Image syntax stays portable across Markdown tools.

Intermediate

5. Tables

Tables help with product specs, comparison notes, plans, and release decisions.

TYPE THIS

Task	Web Editor	Desktop App
---	---	---
Quick draft	Instant start	Native app
Save	Download copy	Direct local save
Recovery	Browser draft	Local history

VELOWRITE PREVIEW

Task	Web Editor	Desktop App
Quick draft	Instant start	Native app
Save	Download copy	Direct local save
Recovery	Browser draft	Local history

6. Quotes And Callouts

Blockquotes are useful for decisions, references, and comments.

TYPE THIS

```
> Keep quick drafts in the browser.  
> Move serious files to desktop.
```

VELOWRITE PREVIEW

Keep quick drafts in the browser.
Move serious files to desktop.

7. Code Blocks

Add a language name after the opening fence for syntax highlighting.

TYPE THIS

```
```python  
def summarize(items):
 return len(items)

print(summarize(["draft", "review"]))
```
```

VELOWRITE PREVIEW

```
def summarize(items):  
    return len(items)  
  
print(summarize(["draft", "review"]))
```

8. Math

VeloWrite renders inline and block math with KaTeX.

TYPE THIS

```
Inline math: $E = mc^2$.  
  
$$  
\int_0^\infty e^{-x^2} dx =  
\frac{\sqrt{\pi}}{2}  
$$
```

VELOWRITE PREVIEW

Inline math: $E = mc^2$.

$$\int_0^\infty e^{-x^2} dx = \frac{\sqrt{\pi}}{2}$$

Advanced

9. Multi-Language Code Tabs

When VeloWrite sees consecutive Python, Bash, Java, and JavaScript code fences, it groups them into a tabbed preview. This is useful for API docs, tutorials, and release notes that compare languages.

TYPE THIS

```
```python
print("hello")
```

```bash
echo "hello"
```

```java
System.out.println("hello");
```

```javascript
console.log("hello");
```
```

VELOWRITE PREVIEW

PythonBashJavaJavaScript

print("hello")

Click a tab in VeloWrite to switch language without scrolling through four separate code blocks.

10. Mermaid Diagram Source

Mermaid source stays readable in Markdown. Diagram rendering is planned, and VeloWrite currently keeps the source visible and portable.

TYPE THIS

```
```mermaid
flowchart LR
 Draft --> Preview
 Preview --> Export
 Export --> Share
```
```

VELOWRITE PREVIEW TODAY

```
flowchart LR
    Draft --> Preview
    Preview --> Export
    Export --> Share
```

Future versions will focus on richer diagram rendering.

11. Outline Navigation

Use headings for long documents. The outline lets you jump to a section, and VeloWrite keeps the editor and preview aligned.

12. Recommended VeloWrite Workflow

Use the browser editor for quick drafts. Use the desktop app for real local files, offline work, recent documents, and recoverable local history.

1. Start in split mode so source and preview stay visible.
2. Use headings early so the outline becomes useful.
3. Use tables for decisions and code blocks for technical details.
4. Export HTML or download Markdown when sharing from the web editor.
5. Move important files to the desktop app for native save and history snapshots.
